

Mammal Images Library Committee

Committee Members: B. Blood, D. G. Huckaby (Chair), B. Huffman, J. S. Kellar, L. L. Master, A. Panebianco, J. S. Scheibe, B. P. Tanis.

Mission:

The Mammal Images Library is a nonprofit educational program of the American Society of Mammalogists with the goal of providing images of mammals for use in education worldwide. The American Society of Mammalogists first established the Mammal Slide Library in 1977. The name change to Mammal Images Library (MIL, ca. 2000) reflected the changes in ways that images of mammals are now stored and accessed: as digital images rather than as 35 mm slides. At the start of 2021, the library contained 5830 digital images representing 27 orders, 162 families, 876 genera, and 2029 species. The images also represent all continents. In addition to optical projection for nonprofit instruction, many of the images may be employed (with permission) for other purposes, including commercial uses.

Information Items:

- (1) The MIL collection contains only digital images, both those taken originally as such and those scanned from 35 mm slides. A lower-resolution preview of each image of generally 660 × 440 pixels, suitable for some projection or web use, is available on the MIL web page (<http://www.mammalogy.org/image-library>) free of charge and without requiring permission. A copy of the higher resolution image, with or without the label (layer), is available upon request for most of the library. We usually charge a handling fee of \$5 for each high-resolution image sent for non-commercial purposes and a royalty (and handling) fee of \$50 each for commercial usage. Non-commercial users who plead poverty may have the fee waived. All fees now go to the general fund of the society.
- (2) The primary focus of the MIL Committee remains making images available to individual users and organizations. During 2021, we had requests for 134 high resolution images that we were able to fulfill. We have no record of the low-resolution images downloaded directly from the library on the ASM website.
- (3) Because of the pandemic, all work on the library stopped in March 2020, because the chair was unable to access his office where the library was stored. Access was granted again in April 2021. We then added 441 new images to the MIL collection during 2021. Among these were 3 subfamilies, 21 genera, and 99 species new to the collection (pages 2-4). In addition, we recognized some new taxa and lumped others (mostly ungulate species and genera recognized by Groves & Grubb 2005), which brings the respective totals to 27 orders, 163 families, 891 genera, and 2053 species. These images include 2 subfamilies, 3 genera, and 23 species newly described or recognized since Wilson and Reeder (2005).
- (4) At the end of December 2021, the MIL collection lacked images of 2 families, 14

subfamilies, 452 genera (ca. 30%), and ca. 70% of the species recognized in the ASM Mammal Diversity Database (<https://mammaldiversity.org/>). We encourage all interested parties to consider contributing their high-quality images to the MIL. Please review our holdings on the MIL web page (<http://www.mammalogy.org/image-library>) to determine if some images from your personal collection could improve the scope and quality of the collection. Anyone interested in submitting images should contact the committee chair.

(5) Starting in 2012, BP Tanis has provided mammal image postings on Mondays and Thursdays for ASM's Facebook, Google+, and Twitter (search for #MondayMammal and #MammalTrivia on our social media accounts).

(6) During 2021, no one left but Jonathan S. Kellar and Antonella Panebianco joined the committee.

(7) This committee thanks the Department of Biological Sciences, California State University, Long Beach for providing computer services and an office for the chair of this committee, without which maintenance of the library would have been much more difficult. These services include the use of a desk computer and advice and work by a computer technician.

Action items:

During the first quarter of 2022 the committee decided to obtain true cloud storage via an iDrive personal account. Although the first year is paid, the society will need to provide funds to continue it in subsequent years. The current yearly price is \$79.50.
